WORK EXPERIENCE

Ford Motor Company

May 2022– Present

Full-stack Software Engineer

- Scaled a Public Charger Data platform in Java Spring Boot, tailoring data processing to business needs, and increasing load capacity of a high-traffic API, averaging around **10k requests per minute**
 - Tech: Java (Spring Boot); MongoDB; GCP; Jenkins; Tekton
- Developed a pilot optimization system for EV charging schedules that maximized green energy utilization and lowered energy costs for nearly 10,000 customers in the Detroit, Denver, and New England areas
 - Tech: Kotlin (Spring Boot); MongoDB; MySQL; TypeScript/Angular
- Built CI/CD pipelines to automate smoke tests, approval requests, GCP deployments, rollbacks, and quality gates; Enabling engineers' ability to improve development speed and stability as measured by Google DORA metrics

General Motors

Capstone Project

- Built an internal Application Lifecycle Dashboard in Angular to centralize workflow management, deployment tracking, and release coordination for engineering teams, improving visibility across the software delivery lifecycle
- Led a 5-engineer team through Agile sprint planning and execution, coordinating task breakdowns, development priorities, and release delivery to ensure on-time execution of the platform
 - Tech: Java (Spring Boot); MariaDB; TypeScript/Angular

EDUCATION

Michigan State University

B.S., Computer Science

- **GPA: 3.9/4.0**
- Graduated with Honors College distinction

SKILLS & INTERESTS

- **Skills:** GCP, Java Spring Boot, MongoDB, Angular, REST APIs, CI/CD
- **Interests:** Camping; Traveling; IoT Projects; Learning Spanish; Cardio
